

EF Core 8.0 Guided Hands-On Exercises

Lab 1: Understanding ORM with a Retail Inventory System

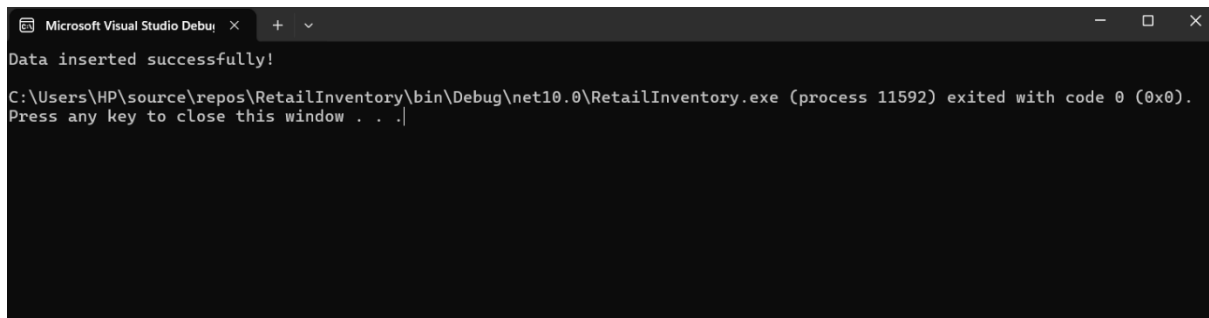

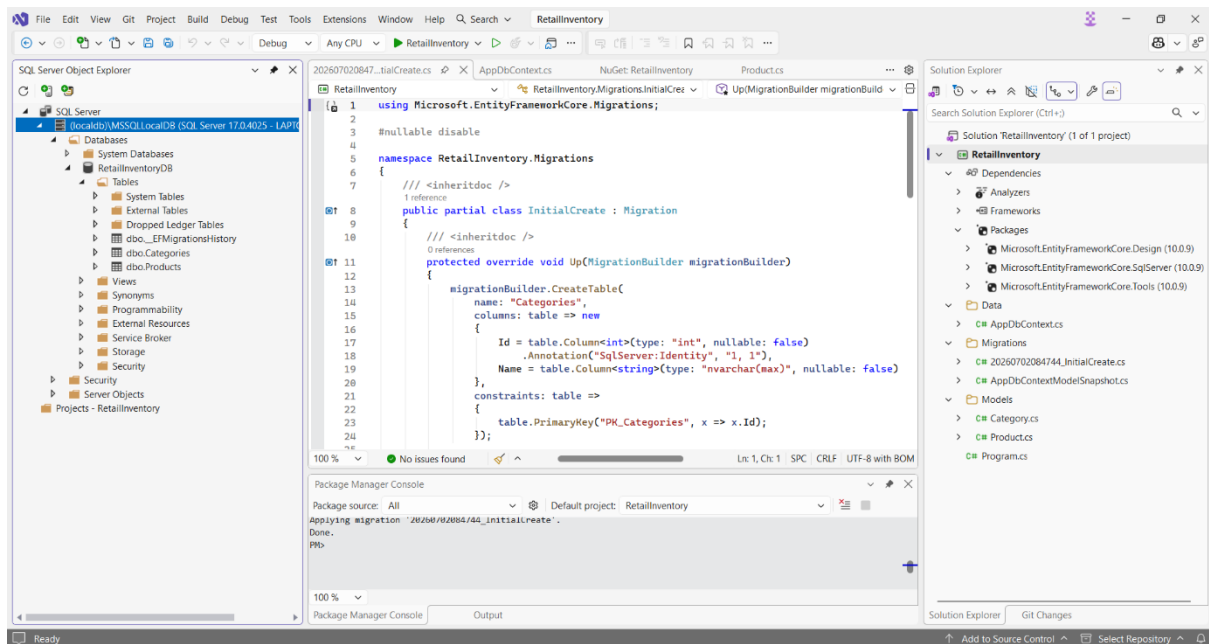

```
Microsoft Visual Studio Debug Console
Hello, World!
C:\Users\HP\source\repos\RetailInventory\bin\Debug\net10.0\RetailInventory.exe (process 10724) exited with code 0 (0x0).
Press any key to close this window . . .|
```

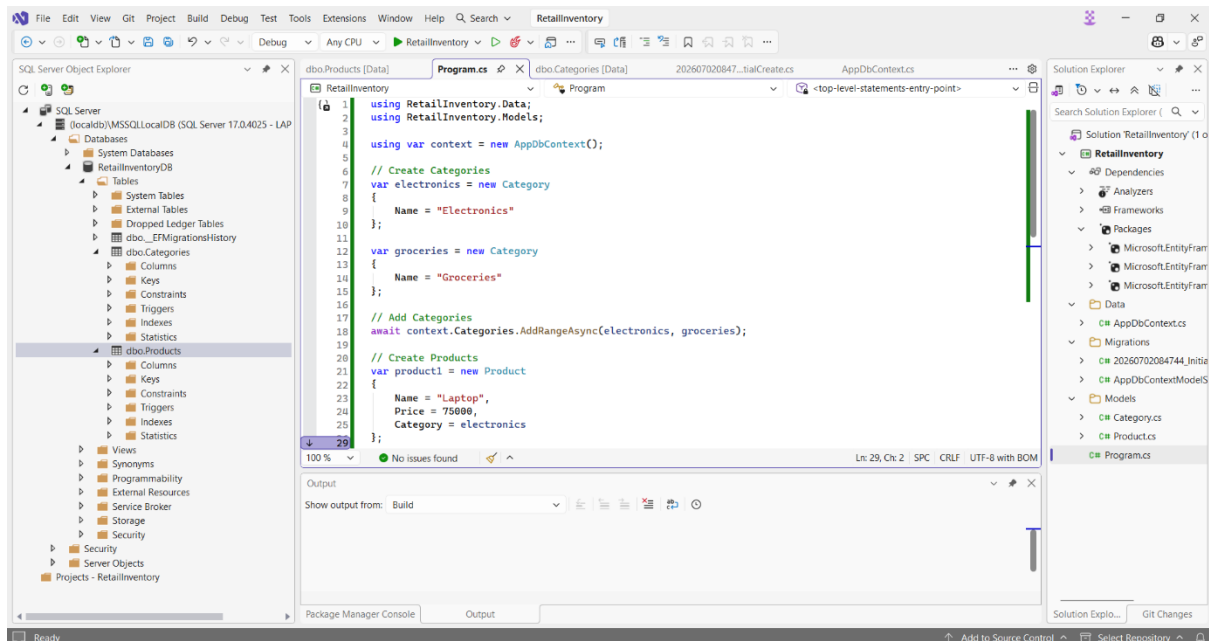

Lab 2: Setting Up the Database Context for a Retail Store

Lab 3: Using EF Core CLI to Create and Apply Migrations

Lab 4: Inserting Initial Data into the Database

The screenshot shows the Visual Studio IDE with the SQL Server Object Explorer on the left. The 'RetailInventory' database is expanded, showing the 'dbo.Categories' table. The table data is displayed in the center pane, showing three rows: Electronics, Groceries, and a NULL row. The bottom pane shows the 'Output' window with the 'Build' output.

Id	Name
1	Electronics
2	Groceries
NULL	NULL

The screenshot shows the Visual Studio IDE with the SQL Server Object Explorer on the left. The 'RetailInventory' database is expanded, showing the 'dbo.Products' table. The table data is displayed in the center pane, showing three rows: Laptop, Rice Bag, and a NULL row. The bottom pane shows the 'Output' window with the 'Build' output.

Id	Name	Price	CategoryId
1	Laptop	75000.00	1
2	Rice Bag	1200.00	2
NULL	NULL	NULL	NULL

Lab 5: Retrieving Data from the Database
