Exercise 1 – HTML5 Base Template

Objective:

Create a semantic HTML5 document structure.

Implementation:

- Used `<!DOCTYPE html>`
- Used `<html lang="en">`
- Added UTF-8 character encoding.
- Added viewport meta tag.
- Organized the page into Navigation, Main, and Footer sections using comments.

Output:

Exercise 2 – Navigation and Linking

Objective:

Create navigation links for different sections.

Implementation:

- Added a navigation bar.
- Created links to Home, Events, and Contact sections.

- Added an external Help page using target="_blank".

Output:

Exercise 3 – Welcome Message with Styling

Objective:

Display a welcome banner using HTML and CSS.

Implementation:

- Created a welcome banner using a <div> element.
- Used an ID selector.
- Used inline styling for the special offer.
- Applied the .highlight CSS class.

Output:

Exercise 4 – Image Gallery

Objective:

Display community event images.

Implementation:

- Created a table with 2 rows and 3 columns.
- Added six event images.
- Applied CSS borders and hover effects.
- Added captions for each event.

Output:

Exercise 5 – Event Registration Form

Objective:

Create a registration form.

Implementation:

- Name field
- Email field
- Phone number
- Event date
- Event type
- Message
- Feedback
- Submit button
- Output message

Output:

The image displays two screenshots of a web browser showing an event registration form. The browser's address bar shows the URL: `C:/Users/HP/Desktop/Upskilling/Module%201-HTML5/LocalCommunityEventPortal/index.html#contact`. The page has a blue header with navigation links: Home, Events, Contact, and Help. The main content area is titled "Event Registration".

The first screenshot shows the registration form with the following fields:

- Name:
- Email:
- Phone:
- Date:
- Event Type:

The second screenshot shows the form after submission. The fields are now empty, and a "Submit" button is visible. Below the form, a message reads: "Registration Successful".

Exercise 6 – Event Feedback with Event Handling

Objective:

Use JavaScript event handlers.

Implementation

Implemented:

- onblur
- onchange
- onclick

Ouput:

Exercise 7 – Video Invite

Objective:

Display an event promo video.

Implementation:

- Added HTML5 <video>
- Added controls
- Used oncanplay
- Added onbeforeunload

Output:

Exercise 8 – Saving User Preferences

Objective:

Store user preferences.

Implementation:

- Stored selected event type using localStorage.
- Retrieved the saved value after page refresh.
- Added a Clear Preferences button.

Output:

Exercise 9 – Geolocation

Objective:

Find nearby events.

Implementation:

- Used `navigator.geolocation.getCurrentPosition()`.
- Displayed latitude and longitude.
- Implemented error handling.
- Enabled high accuracy mode.

Output:

Exercise 10 – Debugging Using Chrome DevTools

Objective:

Debug the application.

Implementation:

- Inspected page elements.
- Used Console for JavaScript logs.
- Added breakpoints.
- Verified layout using DevTools.

Output:
